Dear Mr. Pervuninskikh,

When preparing and holding FIFA World Cup 2018™, Access Control System developed by your company was used to maintain control and to provide accredited persons and spectators with access to stadiums.

Twelve stadiums were equipped with the system; approximately 3000 checkpoints were arranged using turnstiles and hand-held scanners to verify all types of passes and tickets. Successful organizational and technical solutions and high dynamic characteristics of the system provided a high throughput when spectators entered sporting venues, while maintaining comfort for users.

Moreover, NIKIRET developed a Ticket-Entry System according to FIFA requirements, which was installed on the inside perimeter of eight stadiums and was integrated with FIFA Match Ticketing system.

Specialists of your company provided continuous operation of Access Control System and Ticket-Entry System when preparing and holding FIFA World Cup 2018™. During operation of the system no failures or malfunctions that affected people's access to the stadiums were detected.

Autonomous Non-Commercial Organization “Local Organizing Committee “Russia 2018” expresses gratitude to NIKIRET team for successful work in developing and implementing Access Control System for spectators at football

stadiums and Ticket-Entry System. The unique in its own way system has proven itself successful and provided high security level during FIFA World Cup 2018.

CEO
